**DEEP POWDER PACKAGE** \$550 to \$930

Upgrade to 2"x6" rafters (from the standard 2"x4") to increase snow loading. Includes CORR Brackets.

**WINTER STOUT ALPINE YURT PACKAGE** Approx. \$6,900

A package of extra materials for alpine yurts with heavy snow loads.

ALSO AVAILABLE: Deep Powder Packs, Full Snow & Wind Loads

# FEATURES & OPTIONS

## INSULATION PACKAGES

Our insulation packages incorporate Astro-Foil reflective insulation and a washable, flame resistant polyester lining. Astro-Foil is a double layer of air-bubble insulation sandwiched between two layers of aluminium sheathing. It creates an ideal convection and vapour barrier and reflects heat in both directions, to keep you warmer in the winter and cooler in the summer.

The roof insulation includes a separate lining that is visible above the rafters and conceals the actual insulation. The insulation itself goes between the lining and the exterior roof.

Wall insulation comes in panels that overlap approximately six inches. The panels are installed between the lattice wall and the exterior wall fabric.

The lining fabric is sewn directly to the wall insulation and is visible behind the lattice wall.

It can be possible to source, design, cut, sew and add your own wall insulation and liner later if preferred.

The R-Value of Astro-Foil insulation is based on the direction of the heat flow (downward, R15; horizontally, R7.31; and upward, R5.4). R-Value does not fully measure the comfort level achieved in an insulated yurt. The reflective and vapour barrier qualities of Astro-Foil work with heat retention to increase the feeling of warmth.

## CISTERN / GUTTERING SYSTEM

When you order a Cistern System, the roof valance forms a trough with custom made stainless steel hardware. The trough catches all the water running off the roof. We provide bulkhead fittings, to insert into the bottom of the trough, to drain the water. Piping and storage tank are not provided.

## ENTRANCE AWNING

An entrance awning made from Durolast provides some door entrance protected and is supported by a steel framework and screws to the doorjamb with hinged brackets. For more protection however, we recommend building your own porch like area with roof.

## ROLL UP WALL

A roll-up wall offers a 6 ft wide, floor to lattice top opening with a permanent insect mesh, weatherproof cover and an optional transparent vinyl window as a 3rd layer to allow light

## EXTRA WINDOWS AND ROLL-UP WALLS

Extra windows or roll up walls can be added if required for extra light, ventilation and views.

## WINDOW AWNING CONVERSION KIT

Change any window flap into an awning. The conversion includes two hinged, thumbscrew-adjustable, steel poles with guy ropes and tighteners.

You can also convert your window flaps to awnings by providing your own poles and guys ropes and sourcing them locally.

## SCREEN DOORS

Heavy-duty wood-framed screen doors are available. Handsome and substantial, these doors are made tough to handle kids, camps and eco-tourist resorts where they swing open and shut all day long. It is possible however to source screen doors locally to fit if preferred.

## SCREEN CURTAINS

For a simpler solution you can add the screen curtain—a tent-style screen closure that attaches to the doorjamb and zips down the middle. Again – this could be sourced and fitted locally.

# FEATURES & OPTIONS

## FRENCH DOOR UPGRADE

French doors can be supplied. Alternatively doors can also be sourced locally to fit the door jamb if preferred and a discount given for no door supplied.

## BUG NET FOR DOME

This is a net that attaches on the inside of the dome and prevents insects from entering.

NB: It can be done DIY with local materials too.

## BOTTOM COLOUR BAND

This bottom colour band attaches to the bottom of the yurt to provide an extra colour aspect if required

## FULLY OPERABLE WINDOWS

Standard yurt windows can only be opened and closed outside the yurt. A newly designed option is a window which opens just like a window in a traditional home. Most useful where there is little room or space outside to reach windows.

The wooden operable window is thermal pane, Low-E glass in a vertical grain Doug fir frame.

If you already own a yurt the window can be retrofitted into your yurt wall or you can potentially design and fit your own sourced locally.

## COLOURS

A broad range of colour combinations can be chosen. A colour swatch can be emailed with samples
